■ — Our mission

We connect advertising, shade, and comfort.

■ — Our values

Sustainability
Innovation
Responsibility
Efficiency
Humanity

■ — History of parasol production at MONTIS CZ

Here at Montis CZ, we received our first demand for printed parasols in 1997 and we have been making them ever since. After an unsatisfactory experience with prototyping in China, we decided to develop our own parasol that would be sufficiently durable, affordable, and be able to meet short delivery times. After several years of development, in 2001 we introduced our first Florida model, which became very popular thanks to its unique telescopic operation and distinctive design. Since then, other parasol models have come with various changes and improvements. After acquiring our own sublimation printing line in 2013, we closed the loop, and were able to produce structures, print fabric, and sew covers, all “under one roof”. Montis CZ has thus become one of the leading manufacturers of advertising shade technology in Europe. We have been producing parasols for more than 25 years.

■ — The environment

At our company, we strive to contribute to the sustainability of the nature and the environment. That is why we started using recycled materials in the production of our parasols, tents, and other event equipment. These materials not only save natural resources, but also help reduce waste, and improve our company's environmental footprint. In addition, we have also started using alternative fuel vehicles, such as CNG or hybrid vehicles, for transport and transportation. With this step, we want to reduce greenhouse gas emissions and contribute to climate protection. Our goal is to be as sustainable as possible and contribute to environmental protection. That is why we are constantly striving to improve our processes and find new ways to reduce our environmental footprint. We are proud to be one of the first parasol and event equipment manufacturers to focus on sustainability and environmental protection.

Telescopic parasols

FLORIDA

If you are looking for an aluminium parasol that will provide protection from the sun, but also withstand the harshest conditions, then the Florida telescopic parasol is the right choice for you. With wind resistance of up to 82 km/h you can stay calm even in strong winds. Plus, thanks to the telescopic mechanism, the parasol arms open and close easily with “one finger” – so you can enjoy peace of mind on your terrace or garden.

ACAPULCO

Get a high-quality aluminium parasol at a reasonable price with the Acapulco telescopic parasol. This parasol has become popular in food gastronomy industry thanks to its high quality and reasonable price. The telescopic mechanism allows the parasol to be easily opened and closed, and you do not have to remove furniture underneath.

RIO

The large, luxury RIO parasol wins you over thanks to its high weather resistance, long service life, and comfortably easy operation. The modern design with a silvery grey construction fits all gardens and terraces. In addition, thanks to the split leg, it folds easily and can be packed away for transport – so it is also suitable for festivals and events.

MONACO

Self-securing advertising parasols have a completely unique way of operating with minimal force and using a handle. The parasol crown locks itself in an open position (LOCK-UP system). The MONACO parasol is proof that less is sometimes more. We produce this type ranging up from the size of 2x2 m, meaning it will find a very wide application both in HORECA and at home.

CAFÉ

The square CAFÉ parasol is especially popular with owners of cafés, wine bars, bistros, and pastry shops. All those who want to give customers some shade in their gardens and terraces during the sunny season. You will appreciate its light weight, compact packaging, and reasonable price. The dimensions of the CAFÉ parasol make it compact, so storing it away for winter is a piece of cake.

JADRAN

Choose the stylish and durable Jadran parasol, made of high-quality wood. This parasol is characterised by its attractive design, quality workmanship, and sustainable production method. It is ideal for more demanding environments such as restaurants or hotels. The Jadran parasol will provide the necessary shade while giving your space a pleasant and elegant look.

MAXIM

Try the aluminium telescopic parasol Maxim, which stands out thanks to its robust design, quality workmanship, and durability. This parasol is manufactured up to 5x5 m, which allows you to protect large areas from the sun. In addition, the telescopic mechanism makes it easy to open and close, making it a practical and convenient accessory for challenging environments.

SMALL

Small parasols are mainly used in the catering industry or in the commercial sector, where they are used as an unmissable, economically advantageous advertising element, providing sufficient protection from the sun. That is why they are so popular with retailers at farmers' markets or craft fairs. You can tilt the crown of the parasol as needed, making it indispensable by the pool or on the hot sand of the beach. Thanks to its light weight and dimensions, the SMALL beach parasol is easy to store and simply packed into your car for an event or special occasion.

For more information, scan the QR code on your mobile or visit www.montis.cz

— Advantages —

While maintaining its durability in adverse weather conditions, we have managed to reduce not only its weight, but also its price. Other popular parameters, such as height and the possibility to fold the arms of the large parasol over the top of garden furniture, have been retained.

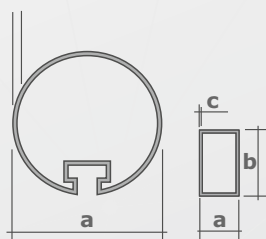

— Construction colour —

- white
- anthracite
