SUSTAINABLE PARASOLS?

**YES WE CAN,
YES WE DO**

Montis CZ - Leading European manufacturer of advertising parasols and event equipment

Our Mission

At Montis CZ, we strive to contribute to the sustainability of the nature and the environment while producing high standard and durable products. That is why we use recycled materials in the production of our parasols, tents and other event equipment. These materials not only save natural resources, but also help reduce waste and improve our company's environmental footprint. In addition, we are using hybrid vehicles for transportation. With this step we want to reduce greenhouse gas emissions and contribute to climate protection.

We are proud to be one of the first parasol and event equipment manufacturers to focus on sustainability and environmental protection, including sourcing, production methods, and transportation strategies.

By using 1 tonne of recycled yarn we contribute to:

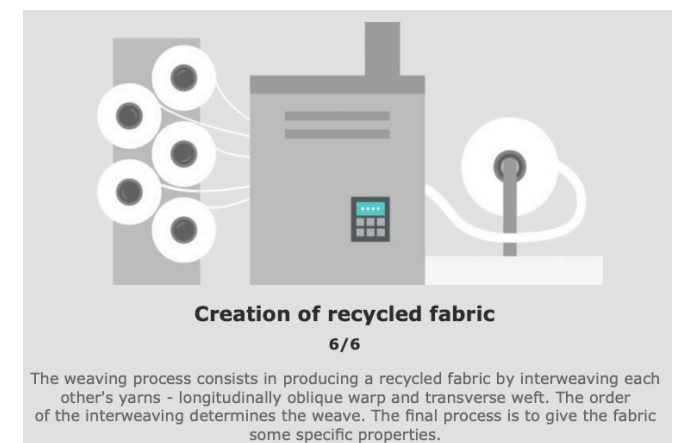

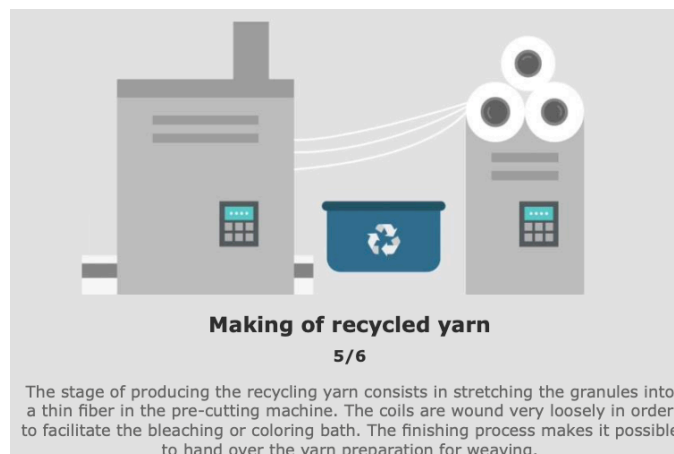

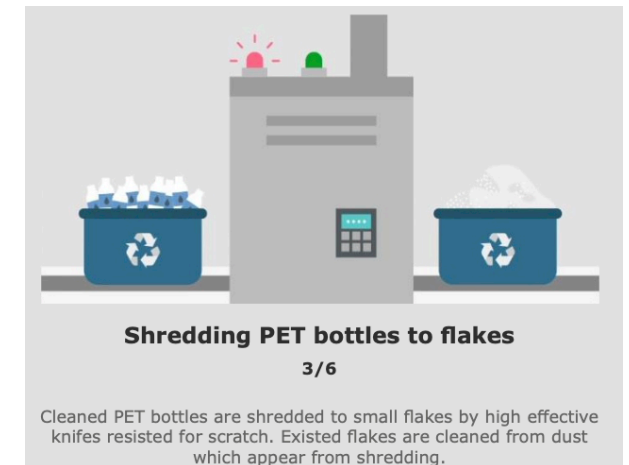

-  reducing dust emissions by **60 kilograms**
-  saving **50,000 litres** of water
-  reducing water vapour by **4,000 kg/m³**
-  decreasing SO₂ emissions by **48 kilograms**
-  reducing fuel consumption by **1,500 litres**

Production Method's

The first step towards creating sustainable parasols is sourcing recycled materials. By repurposing materials we contribute significantly to reducing waste and conserving natural resources. Through meticulous sorting and quality control processes, only the best recycled materials are selected for use in the production of our parasols. This ensures that the final product meets high standards of durability and aesthetics.

Our manufacturing process follows strict sustainability guidelines while maintaining excellent product quality. Utilizing energy-efficient machinery and technologies, we minimize energy consumption during production. We also prioritize water conservation by implementing recycling systems that collect and treat wastewater generated during the manufacturing process. That way we save tens of thousands liters water a year. To further reduce our carbon footprint, we also use non-toxic dyes and coatings.

Circular Economy Principles

One of our key principle is the concept of a circular economy. We strive to create a closed-loop system where materials are continuously reused and recycled. Once a parasol reaches the end of its lifecycle, it can be returned to our company for proper recycling. The fabric as well as the alluminium construction are then reprocessed and incorporated into the production of new parasols.

Sustainable Transport Strategies

We understand that sustainable practices extend beyond sourcing and production. To minimize our environmental impact during transportation, we have implemented various strategies, as using electric and/or hybrid vehicles. Additionally, we optimize packaging to minimize space and maximize efficiency during transportation.

By working closely with our logistics partners who share the same commitment to sustainability, we further reduce carbon emissions associated with delivery. For packing of our parasols we use carton boxes secured by a paper-based tape.

Inspiring Change in Companies

For some the sustainability ends when it comes to price. By demonstrating that it is possible to (re)create affordable, high-quality products while minimizing environmental harm, we challenge the industry norms and encourage others to follow. At Montis CZ is sustainability not only a “trendy word”, we truly live what we preach.

By choosing our products, our clients can support the movement towards a more sustainable future.
